Valley Federal Savings & Loan Association took an \$ 89.9 million charge as it reported a third-quarter loss of \$ 70.7 million , or \$ 12.09 a share . The Van Nuys , Calif. thrift had net income of \$ 132,000 , or three cents a share , a year ago . The bulk of the pretax charge is a \$ 62 million write-off of capitalized servicing at the mobile home financing subsidiary , which the company said had been a big drain on earnings . The company said the one-time provision would substantially eliminate all future losses at the unit . Valley Federal also added \$ 18 million to real estate loan reserves and eliminated \$ 9.9 million of good will . The thrift said that `` after these charges and assuming no dramatic fluctuation in interest rates , the association expects to achieve near record earnings in 1990 . '' Valley Federal is currently being examined by regulators . New loans continue to slow ; they were \$ 6.6 million in the quarter compared with \$ 361.8 million a year ago . On weekends, she came to work to prepare study plans or sometimes, even to polish the furniture in her classroom. "She just never gave it up," says Mary Marchand, Mary Beth's mother. "You'd see her correcting homework in the stands at a football game." Some fellow teachers, however, viewed Mrs. Yeargin as cocky and too yielding to students. Mrs. Ward says she often defended her to colleagues who called her a grandstander. Pressures began to build. Friends told her she was pushing too hard. Because of deteriorating hearing, she told colleagues she feared she might not be able to teach much longer. Mrs. Yeargin's extra work was also helping her earn points in the state's incentive-bonus program. But the most important source of points was student improvement on tests. Huge gains by her students in 1987 and 1988 meant a total of \$5,000 in bonuses over two years: a meaningful addition to her annual salary of \$23,000. Winning a bonus for a third year was not that important to her, Mrs. Yeargin insists. But others at Greenville High say she was eager to win: if not for money, then for pride and recognition. Mary Elizabeth Ariail, another social-studies teacher, says she believed Mrs. Yeargin wanted to keep her standing high so she could get a new job that would not demand good hearing. Indeed, Mrs. Yeargin was interested in a possible job with the state teacher cadet program. Last March, after attending a teaching seminar in Washington, Mrs. Yeargin says she returned to Greenville two days before annual testing, feeling that she had not prepared her low-ability geography students adequately. When test booklets were passed out 48 hours ahead of time, she says she copied questions in the social studies section and gave the answers to students. Mrs. Yeargin admits she made a big mistake but insists her motives were correct. "I was trying to help kids in an unfair testing situation," she says. "Only five of the 40 questions were geography questions. The rest were history, sociology, finance -- subjects they never had." Mrs. Yeargin says that she also wanted to help lift Greenville High School's overall test scores, usually near the bottom of 14 district high schools in rankings carried annually by local newspapers. Mostly, she says, she wanted to prevent the damage to self-esteem that her low-ability students would suffer from doing badly on the test. "These kids broke my heart," she says. "A whole day goes by and no one even knows they're alive. They desperately needed somebody who showed they cared for them, who loved them. The last thing they needed was another drag-down blow." School officials and prosecutors say Mrs. Yeargin is lying. They found students in an advanced class a year earlier

Rally Inc. said it has redeemed its rights outstanding issued Monday in its shareholder rights plan. The company said holders of stock of record Nov. 10 will receive 1/10th of one cent a share as the redemption payment. The fast-food company said its decision was based upon discussions with a shareholder group, Giant Group NNP Ltd. in an effort to resolve certain disputes with the company. Bernstein, chairman and CC president of Random House Inc., announced his resignation from the publishing house he has run for 23 years. A successor was not named, which fueled speculation that Mr. Bernstein may have clashed with S.I. Newhouse Jr., whose family company, Advance Publications NNP Inc., owns Random House. Abrupt departures are not unheard of within the Newhouse empire. In an interview, Mr. Bernstein said his departure evolved out of discussions with Si Newhouse and CC that the decision I reached. "He declined to elaborate, other than to say, "It just seemed the right thing to do at this minute. Sometimes you just go with your gut. The federal government suspended sales of U.S. savings bonds because Congress has not lifted the ceiling on government debt. Until Congress acts, the government has not any authority to issue new debt obligations of any kind, the Treasury said. The government's borrowing authority dropped at midnight Tuesday to \$ 2.80 trillion from \$ 2.87 trillion. Legislation to lift the debt ceiling is ensnared in the fight over cutting capital-gains taxes. The House has voted to raise the ceiling to \$ 3.1 trillion, but the Senate is not expected to act until next week at the earliest. The Treasury said the U.S. will default on Nov. 9 if Congress does not act by then. Investors unsettled by the stock market's gyrations can take some comfort in the predictable arrival of quarterly dividend checks. That has been particularly true this year with many companies raising their payouts more than 10%. But do not breathe too easy: Those dividend increases may signal trouble ahead for stock prices, some analysts warn. In the past, they say, the strongest dividend growth has often come at times when the stock-market party was almost over. That can be a trap for unwary investors, says Richard Bernstein, senior quantitative analyst at Merrill Lynch & CC Co. Strong dividend growth, he says, is the black widow of valuation -- a reference to the female spiders that attract males and then kill them after mating. Stephen Boesel, president of T. Rowe Price Growth and CC Income Fund, explains that companies raise their payouts most robustly only after the economy and corporate profits have been growing for some time. Invariably, those strong periods in the economy give way to recessionary environments, he says. And recessionary environments are not hospitable to the stock market. Indeed, analysts say that payouts have sometimes risen most sharply when prices were already on their way down from cyclical peaks. In 1976, for example, dividends on the stocks in Standard & Poor's 500-stock index soared 10%, following much slower growth the year before. The S&P index started sliding in price in September 1976, and fell 12% in 1977, despite a 15% expansion

in dividends that year. That pattern has n't always held, but recent strong growth in dividends makes some market watchers anxious. Payouts on the S&P 500 stocks rose 10% in 1988, according to Standard & Poor's Corp., and Wall Street estimates for 1989 growth are generally between 9% and 14%. Many people believe the growth in dividends will slow next year, although a minority see double-digit gains continuing. Meanwhile, many market watchers say recent dividend trends raise another warning flag: While dividends have risen smartly, their expansion has n't kept pace with even stronger J.R. advances in stock prices. As a result, the market's dividend yield -- dividends as a percentage of price -- has slid to a level that is fairly low and unenticing by historical standards. Put another way, the decline in the yield suggests stocks have gotten pretty rich in price relative to the dividends they pay, some market analysts say. They are keeping a close watch on the yield on the S&P 500. The figure is currently about 3.3%, up from 3.2% before the recent market slide. Some analysts say investors should run for the exits if a sustained market rebound pushes the yield below 3%. A drop below that 3% benchmark "has always been a strong warning sign that stocks are fully valued," says Mr. Boesel of T. Rowe Price. In fact, "the market has always been tanked. Always. There's never been an exception," says Gerald W. Perritt, a Chicago investment adviser and money manager, based on a review of six decades of stock-market data. The last time the S&P 500 yield dropped below 3% was in the summer of 1987. Stockholders who took the hint and sold shares escaped the October debacle. There have been only seven other times -- in 1929, 1933, 1961, 1965, 1968, 1971 and 1972 -- when the yield on the S&P 500 dropped below 3% for at least two consecutive months, Mr. Perritt found. And in each case, he says, a sharp drop in stock prices began within a year. Still, some market analysts say the current 3.3% reading is n't as troublesome as it might have been in years past. "It's not a very meaningful indicator currently because corporations are not behaving in a traditional manner," says James H. Coxon, head of stock investments for Cigna Corp., the Philadelphia-based insurer. In particular, Mr. Coxon says, businesses are paying out a smaller percentage of their profits and cash flow in the form of dividends than they have historically. So, while stock prices may look fairly high relative to dividends, they are not excessive relative to the underlying corporate strength. Rather than increasing dividends, some companies have used cash to buy back some of their shares, notes Steven G. Einhorn, co-chairman of the investment policy committee at Goldman,

under the pretext of guarding the public purse, to deny the president the funding necessary to execute certain of his duties and prerogatives specified in Article II of the Constitution. This species of congressional action is predicated on an interpretation of the appropriations clause that is erroneous and unconstitutional. The appropriations clause states that "No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law." The prevailing interpretation of the clause on Capitol Hill is that it gives Congress an omnipresent veto over every conceivable action of the president through the ability to withhold funding. This interpretation was officially endorsed by Congress in 1987 in the Iran-Contra Report. As partisans of congressional power understand, a "power" of the purse "so broadly construed would emasculate the presidency and swallow the principle of separation of powers." It is not supported by the text or history of the Constitution. The framers hardly discussed the appropriations clause at the Constitutional Convention of 1787, according to Madison's notes. To the extent they did, their concern was to ensure fiscal accountability. Moreover, the framers believed that the nation needed a unitary executive with the independence and resources to perform the executive functions that the Confederation Congress had performed poorly under the Articles of Confederation. It would contradict that objective if the appropriations clause - technically a limitation on legislative power - could be read as placing the president on Congress's short leash, making the executive consist of the president and every member of Congress. As it went to the conference panel now deliberating, the appropriations bill for the executive office of the president for fiscal 1990 contained some breathtaking attempts by Congress to rewrite the Constitution under the pretext of protecting the public's money. During the coming weeks, President Bush must decide whether to veto the bills containing them or, alternatively, to sign these bills into law with a statement declaring their intrusions on executive power to be in violation of Article II, and thus void and severable. The 1990 appropriations legislation attempts to strip the president of his powers to make certain appointments as provided by Article II. Article II places on the president the duty to nominate, and by and with the Advice and Consent of the Senate, "and CC" appoint ambassadors, judges, and other officers of the U.S. It also empowers the president to make recess appointments, without Senate approval. The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session. Yet Section 605 of the appropriations bill for the executive office provides: "No part of any appropriation for the current fiscal
